

Patching Dropbox on Windows and macOS

Last Modified on 08/24/2020 6:42 pm EDT

This describes the behavior when patching Dropbox through Automox.

You might see that even if Dropbox has been shutdown, the app might relaunch after an update. This is a vendor behavior we cannot control or change. If Dropbox is open during the patch, Automox will relaunch the app.

NOTE: If a file sync application is open when patching begins, Automox will always relaunch it after patching.
