Adding Patches to the Block List in the Automox Console

You can ensure that a patch is blocked from running from the Device Details page or Software page using the Bulk Actions or Actions menu for the patch in question.

On the **Device Details** page, the list of software and patches are shown at the bottom of the page:

1. Select the checkbox for the software you want to block.
2. Select Ignore from the **Bulk Actions** drop-down menu.
3. Confirm the selection.

On the **Software** page, the Actions drop-down menu can also be used to ignore the patch.

- Select Ignore from the Actions menu. **Note:** There is no confirmation message and is effective immediately.
