Installing the Automox Agent on Linux

To install, restart, and remove the Automox agent on Linux devices, refer to the commands listed here.

**Install the agent**

To install the Automox agent, run this command:

```bash
curl -sS https://console.automox.com/downloadInstaller?accesskey=YOUR-ORGANIZATION-KEY | sudo bash
```

**Check the status**

Use service manager to check the status of the agent.

```bash
sudo service amagent status
```

**Inspect the process list**

You can also use this command to check the process.

```bash
ps aux | grep amagent
```

**Start the agent service**

Use this command to start the agent, if it is not already running.

```bash
sudo service amagent start
```

**Restart the agent**

You might want to restart the agent (for example, during an update).

```bash
sudo service amagent restart
```

**Uninstall the agent**

You can use these commands to remove the agent from your device.

RedHat, CentOS:

```bash
sudo yum erase amagent
```

Debian, Ubuntu:

```bash
```
sudo apt-get purge amagent

**Fedora:**

sudo dnf remove amagent
