

Patching File Sync Applications on Automox

Last Modified on 12/09/2020 1:28 pm EST

This describes the behavior when patching file sync applications, such as Dropbox and Box Drive, through Automox.

Even if a file sync app has been shutdown, it might relaunch after an update. This is a vendor behavior that we cannot control or change. If the app is open during the patch, Automox will relaunch it.

The behavior described here applies to the following file sync apps supported by Automox:

- Dropbox
- Box Drive

NOTE: If a file sync application is open when patching begins, Automox will always relaunch it after patching.
