

MSI Legacy Agent Install Instructions

Due to modern security standards, Automox utilizes SHA-256 certificate signing with our Agent MSI installer. Some legacy operating systems do not support the SHA-256 standard but do function properly with the Automox agent.

At this time, the standard agent installer should be used with Windows Server 2008 R2 / Windows 8 and newer.

We recommend that the following OS Agent installations utilize the Legacy installer:

- Microsoft Windows Server 2008
- Microsoft Windows Server 2003
- Windows Vista
- Microsoft Windows XP

Please note that these older operating systems are not *officially* supported by Automox. There are 2 minimum requirements that can allow Automox to run on them:

- Microsoft .NET Framework 3.5 or later
- Windows PowerShell 2.0 or later

The latest Legacy installer can be downloaded: [Click Here](#).
