

# Week in Review - Release Notes for Week Ending 7/31/2020

Last Modified on 12/12/2020 3:23 pm EST

## Bug Fixes:

- Fixed issue with version scraping for Slack. (7/29)
- Fixed issue with Mac .14 where choosing "Now" in a patch notification still resulted in a 15 minute delay. (7/29)
- Fixed issue where some customers on a legacy billing plan could not update their billing info. (7/30)

## Enhancements:

- We have upgraded our Settings page to use a new frontend architecture, which will be slowly rolled out this year to all of our Console pages. No functionality should change (let us know if you see something that is broken!), but this new frontend will provide a new, more expandable foundation for our Console application going forward. (7/29)
