

Week in Review: Weekly Release Notes for Week Ending 5/1/2020

Last Modified on 12/18/2020 9:07 pm EST

Bug Fixes:

- Fixed a bug where the “add new user” flow in settings was submitting incorrectly and routing the user to the dashboard.
- Fixed an issue where the dropdowns for Activity Log were taking up too much space in IE11.
- Fixed a bug for Firefox 32-bit identification.
- Fixed a bug where the “add new user” flow in settings was submitting incorrectly and routing the user to the dashboard.
- Fixed the limit version upgrade in Cyberduck 32-bit to 7.0.2.
- Cross check policy RBAC permissions when modifying policies attached to a server group.
- Cross check group RBAC permissions when modifying groups attached to policies.
- Agents will no longer uninstall themselves when --deregister is run while the agent is active.
- Fixed a bug that was causing timeouts and extended response times on the Devices Page when scanning a large number of devices.

Enhancements:

- Changed Software Page Date Column to Days Exposed Column.
 - New third party patching support for Camtasia 2018 and 2019 on both macOS and Windows.
 - Improved file downloads for Required Software policies and Worklets on endpoints that are behind a proxy server.
 - Replaced global animated loading dots with new Automox logo loader.
-
