

Week in Review: Weekly Release Note Summary for Week Ending 4/10/2020

Last Modified on 12/18/2020 9:29 pm EST

Four new third party titles, minor bug fixes and enhancements

Bug Fixes:

- Refreshes software packages list after status is updated and refines the accuracy of the status shown
- Fixed a bug that prevented customers from changing their update settings back to 'Keep User Settings' in the wsus update section
- Added needs_attention as one of the values returned for a server
- Fixed 500 error that occurred when requesting paged servers
- Fixed the reset filter link for software filters

Enhancements:

- New third party patching support for Filezilla on macOS and Windows
 - New third party patching support for Sublime Text 3 on macOS and Windows
 - New third party patching support for XnViewMP on macOS and Windows
 - Events with highly similar data are now hidden from activity log. The "Last 25" option has been removed as a filter. The user's last selection for a date range filter will be remembered and applied next time they visit the page.
 - New third party patching support for Inkscape on Windows
-
