Release Notes for Week Ending 01/15/2021

Enhancements

- Two Factor Authentication (2FA) can now be applied across an organization.
  More information can be found here:
  Enforce Organization-Wide Two-factor Authentication
  Managing User Accounts and Two-factor Authentication
- Updated the look and feel of the Device Details page. These documentation pages have been updated to reflect the changes:
  Device Details
  Configuring Software on a Device
- Validations for Custom Notifications and Reboot Deferral Configuration in Policies were added to ensure that some required fields aren't missing.

Bug Fixes

- Fixed a bug with the Activity Log Report that could sometimes limit results shown. Validation for GET api/policyschedule was fixed and now returns a 400 when schedule_time has an invalid format.
